Chapter 1: Introduction to CT

- CT uses X-rays + computer to create axial slices. Hounsfield Units: Air -1000, Water 0, Bone +1000.
- Indications: trauma, chest, abdomen, angiography.
- Spiral vs Sequential: Spiral faster, less motion.

Chapter 2: CT Windows

- Lung window: W1500 L-600 for lung parenchyma.
- Mediastinal window: W350 L40 for soft tissue.
- Bone window: W2000 L400 for fractures.

Chapter 3: Patient Positioning & Contrast

- Supine, arms up for chest CT. Breath hold.
- IV contrast: check creatinine, allergy, fasting.
- Oral contrast for abdomen when needed.

Chapter 4: Radiation & Safety

- CT dose higher than X-ray: ALARA. Use low-dose protocols.
- Pregnancy: justify, shield.
- Contrast reaction kit must be ready.
